Compounds formed from combinations of acids and bases taste salty and are referred to in chemistry as salts. Sweet compounds have characteristics of both acids and bases in the same molecule. We will explore the relationship between molecular structure and acids-bases, and consider water solutions of acids and bases.

Introduction to Acids and Bases. All acids turn blue litmus paper red, and their solutions conduct electricity because acids form ions when dissolved in water. All bases also share several common properties: They have a bitter taste; their solutions feel slippery like soapy water; and they turn red litmus paper blue (the opposite of acids).

Acids and bases have been known for a long time. When Robert Boyle characterized them in 1680, he noted that acids dissolve many substances, change the color of certain natural dyes (for example, they change litmus from blue to red), and lose these characteristic properties after coming into contact with alkalis (bases). In the eighteenth century, it was recognized that acids have a sour taste ...
