(1.4) The order of an ordinary DE is defined to be the order of the highest derivative in the equation. Thus, equations (1.1) and (1.2) are first order, whereas (1.3) and (1.4) are second order. Besides ordinary DEs, if the relation has more than one independent variable, then it is called a partial DE.

Introduction to Ordinary Differential Equations MIT has an entire course on differential equations called 18.03. However, there is a technique using differentials that fits in well with what we've been doing with integration. We'll discuss that here. dy The simplest type of differential equation looks like:  $y' = f(x)$ .
