In chemistry, a base is thought of as a substance which can accept protons or any chemical compound that yields hydroxide ions (OH⁻) in solution. It is also commonly referred to as any substance that can react with an acid to decrease or neutralize its acidic properties, change the color of indicators (e.g. turn red litmus paper blue), feel slippery to the touch when in solution, taste bitter ...

Base (chemistry) - New World Encyclopedia

Post-transition metals are a set of metallic elements in the periodic table located between the transition metals to their left, and the metalloids to their right. Depending on where these adjacent groups are judged to begin and end, there are at least five competing proposals for which elements to include: the three most common contain six, ten and thirteen elements, respectively (see image).

Post-transition metal - Wikipedia
