In physics, equations of motion are equations that describe the behavior of a physical system in terms of its motion as a function of time. More specifically, the equations of motion describe the behaviour of a physical system as a set of mathematical functions in terms of dynamic variables: normally spatial coordinates and time are used, but others are also possible, such as momentum ...

In physics, spacetime is any mathematical model that fuses the three dimensions of space and the one dimension of time into a single four-dimensional continuum. Spacetime diagrams can be used to visualize relativistic effects such as why different observers perceive where and when events occur differently.. Until the turn of the 20th century, the assumption had been that the three-dimensional ...

For that reason variational methods in the form of finite-element (FE) approximations have gained enormous momentum in this field. These methods, which are referred to as crystal plasticity finite-element (CPFE) models, are based on the variational solution of the equilibrium of the forces and the compatibility of the displacements using a weak form of the principle of virtual work in a given ...

A bucket with mass  $m_2$  and a block with mass  $m_1$  are hung on a pulley system. Find the magnitude of the acceleration with which the bucket and the block are moving and the magnitude of the tension force  $T$  by which the rope is stressed. Ignore the masses of the pulley system and the rope.

A ladder is leant against the wall. The coefficient of the static friction  $\mu_{sw}$  between the ladder and the wall is 0.3 and the coefficient of the static friction  $\mu_{sf}$  between the ladder and the floor is 0.4. The centre of mass of the ladder is in the middle of it. Find the minimum angle that the ladder can form with the floor not to slip down.
