Have fun with your algorithms. $1.2 \cdot 2$ Insertion sort beats merge sort when $8n^2 < 64n \lg n$, $n < 8 \lg n$, $2n = 8 < n$. This is true for $2 \leq n \leq 43$ (found by using a calculator). Rewrite merge sort to use insertion sort for input of size 43 or less in order to improve the running time.

Solutions for Introduction to algorithms second edition

We could modify the Merge Sort algorithm to count the number of inversions in the array. The key point is that if we find $L[i] > R[j]$, then each element of $L[i:]$ (represent the subarray from $L[i]$) would be as an inversion with $R[j]$, since array L is sorted. COUNTING-INVERSIONS and INTER-INVERSIONS shows the pseudo-code of this algorithm.
