Classical mechanics describes the motion of macroscopic objects, from projectiles to parts of machinery, and astronomical objects, such as spacecraft, planets, stars and galaxies.. If the present state of an object is known it is possible to predict by the laws of classical mechanics how it will move in the future (determinism) and how it has moved in the past (reversibility).

Heat travels only from hot to cold. Carnot's principle. In 1824, Sadi Carnot gave a fundamental limitation of steam engines by analyzing the ideal engine now named after him, which turns out to be the most efficient of all possible heat engines. This result is probably best expressed with the fundamental thermodynamical concepts which were fully developed after Carnot's pioneering work ...

En mathématiques, la théorie du chaos étudie le comportement des systèmes dynamiques très sensibles aux conditions initiales, un phénomène généralement illustré par l'effet papillon.Pour de tels systèmes des différences infimes dans les conditions initiales entraînent des résultats totalement différents, rendant en général toute prédiction impossible à long terme.

Le succès rapide des méthodes de théorie quantique des champs, par exemple dans le calcul de la diffusion Compton, n'occultait pas certains problèmes.D'une part, il existait un écart non négligeable entre les prédictions et les mesures dans plusieurs expériences impliquant les rayons cosmiques.D'autre part, et plus inquiétant pour la cohérence de la théorie, le développement des ...
