Darrieus wind turbines are not self-starting. Therefore a small powered motor is required to start off

the rotation, and then when it has enough speed the wind passing across the aerofoils starts to generate torque and the rotor is driven around by the wind.

### **Darrieus Wind Turbines | REUK.co.uk**

Savonius wind turbines are best suited to applications such as pumping water (see image above) and grinding grain for which slow rotation and high torque are desirable. They are often used in the Third World in exactly these ways with wind turbines made from an old oil barrel (or barrels) welded to a pole which is passed through bearings taken from an old vehicle.
