Ok, I have 3 questions. I already know how to make a device that spins in the wind (in this case I am using a creek, so water). I need to know... 1. How do I take the kinetic energy from the spinning and turn it into electricity 2. How do I store that electricity so it can be used only when needed (when I want to turn on a light for example), do I use battery, capacitor, etc. 3.

Power produced at home, kinetic energy to electric charge ...

Heinemann Physics 1 4e b The difference is that the heat energy that makes the steam is produced by burning coal instead of a nuclear fission reaction. c They both use steam to turn a turbine to generate electricity. 14 a control rod: absorbs neutrons b radiation protection barrier: provides shielding to prevent radiation escaping
