### **Relationship Biodiversity Lab Answer Key**

Answers for Critical Thinking Questions. Functional classification of joints is based on the degree of mobility exhibited by the joint. A synarthrosis is an immobile or nearly immobile joint. An example is the epiphyseal plate or the joints between the skull bones surrounding the brain.

### **9.1 Classification of Joints | Anatomy & Physiology**

Print Exercise 13: Articulations and Body Movements flashcards and study them anytime, anywhere. Print Options. Font size: ← Back to notecard set | Easy Notecards ... The synovial membrane secretes synovial fluid which serves to lubricate the joint and reduce the friction between bones in joints. 14.

### **Print Exercise 13: Articulations and Body Movements ...**

388 Chapter 15 Skeletal, Muscular, and Nervous Systems ... Hinge joints, found at the elbow, knee, ankle, and fingers, allow a joint to bend and straighten, promoting rotation. ... • Analyze the relationship between health promotion and prevention of bone disorders.

### **Chapter 15: Skeletal, Muscular, and Nervous Systems**

The functional classification of joints is determined by the amount of mobility found between the adjacent bones. Joints are thus functionally classified as a synarthrosis or immobile joint, an amphiarthrosis or slightly moveable joint, or as a diarthrosis, which is a freely moveable joint (arthron = "to fasten by a joint").

### **9.1 Classification of Joints - Anatomy and Physiology**

Synovial fluid functions to 1. absorb shocks at joints 2. lubricate joints 3. form a blood clot in a joint injury 4. supply oxygen and nutrients to chondrocytes 5. provide phagocytes to remove debris from joints.

### **A&P Chapter 9 - Joints - ProProfs Quiz**

Movements - mainly flexion and extension e.g. elbow, knee, phalangeal joints 2. Pivot joints - Also monaxial, a rounded process of one bone fits into a shallow depression in another bone and then rotates along its long axis
