1: The Human Body: An Orientation - wps.pearsoned.com

Sex differences in human physiology are distinctions of physiological characteristics associated with either male or female humans. These can be of several types, including direct and indirect. Direct being the direct result of differences prescribed by the Y-chromosome, and indirect being a characteristic influenced indirectly (e.g. hormonally) by the Y-chromosome.

Welcome to Human Anatomy & Physiology! To get started on Chapter 1, click Chapter Quizzes or Chapter Games and Activities to the left. To get started on any other chapter, select the chapter title from the drop-down menu above, then click Go.. There are four Chapter Quizzes for every chapter.

Chapter 1: The Human Body: An Orientation

We have been created fearfully and wonderfully by our Creator God, and the human body showcases God's intricate design. Design features are evident in the structures and functions of each of the body systems. I present a design approach to the study of human anatomy and physiology from a biblical worldview.

Striated Musculature . Striated musculature is comprised of two types of tissues: skeletal muscle and cardiac muscle. Skeletal muscle is the tissue that most muscles attached to bones are made of. Hence the word "skeletal". Cardiac muscle, on the other hand, is the muscle found on the walls of the heart.. Microscopically both the skeletal and cardiac musculature have a "striated" appearance
