Asexual Reproduction in Plants: Advantages, Disadvantages ...

The aphids are probably best known as "greenfly" on roses or "blackfly" on broad beans. They belong to a group of insects known as "bugs" or Hemiptera, the mouth parts of which are modified to form piercing and sucking tubes, the insects obtaining their food by sucking plant juices or the blood of other animals.

Aphids, Hemiptera, life-cycle and behaviour, reproduction ...

Radiation Myths. We are not dying from radiation exposure as some would lead us to believe. We need to question what we read and hear. When we read that someone died or has cancer and it is "suspected" or "assumed" to be from the person using a cell phone, receiving a chest x ray, or living in a state with a nuclear power plant, we simply cannot believe this information at face value.

Common Radiation Myths - Radiation Information and Answers

In biology, an organism (from Greek: ὁργανισμός, organismos) is any individual entity that exhibits the properties of life. It is a synonym for "life form". Organisms are classified by taxonomy into specified groups such as the multicellular animals, plants, and fungi; or unicellular microorganisms such as a protists, bacteria, and archaea. All types of organisms are capable of ...

Radiation Sources, Doses, & Cancer. We will now combine information from various other charts in this section. First, though, remember that without radiation exposure, the odds of getting cancer are 1 in 2.4 (or 42 percent). This means that of 100 average people I know, including me, 42 of us may get cancer at some time in our lives.

Radiation Sources, Doses & Cancer

Introduction The angiosperms are seed-bearing plants that produce flowers. The seeds, which contain the plant embryo, are produced in the flower. All the parts of a flower are actually modified leaves that are specialized for their roles in the reproductive process.

A nutrient is a substance used by an organism to survive, grow, and reproduce. The requirement for dietary nutrient intake applies to animals, plants, fungi, and protists. Nutrients can be incorporated into cells for metabolic purposes or excreted by cells to create non-cellular structures, such as hair, scales, feathers, or exoskeletons. Some nutrients can be metabolically converted to smaller ...

Under the right conditions, a sweet potato will sprout green shoots, leaves, and tiny, thin roots, as shown in Figure 2, below. These sprouts are called "slips." One sweet potato can grow many slips. Each slip can be removed by twisting it off of the sweet potato and then grown into a whole new sweet potato plant that is able to make more sweet potatoes!

When combining two crops using standard agricultural techniques, genes are allowed to mix at random. A typical example is Triticale, a synthetic hybrid between wheat and rye grown in Europe, which is the result of combining 50,000 largely untested genes, 25,000 from each species. 10 GM crops, in contrast, have specific genes inserted to produce the same desired effect.
