Positive feedback is a process that occurs in a feedback loop in which the effects of a small disturbance on a system include an increase in the magnitude of the perturbation. That is, A produces more of B which in turn produces more of A. In contrast, a system in which the results of a change act to reduce or counteract it has negative feedback. Both concepts play an important role in science ...

The number of wild animals vastly exceeds that of animals on factory farms. Therefore, animal advocates should consider focusing their efforts to raise concern about the suffering that occurs in nature. In theory, engineering more humane ecological systems might be valuable. In practice, however, it seems more effective to promote the meme of caring about wild animals to other
