The heat capacity rate is heat transfer terminology used in thermodynamics and different forms of engineering denoting the quantity of heat a flowing fluid of a certain mass flow rate is able to absorb or release per unit temperature change per unit time. It is typically denoted as C , listed from empirical data experimentally determined in various reference works, and is typically stated as a ...

Nucleate boiling is a type of boiling that takes place when the surface temperature is hotter than the saturated fluid temperature by a certain amount but where the heat flux is below the critical heat flux. For water, as shown in the graph below, nucleate boiling occurs when the surface temperature is higher than the saturation temperature (T_S) by between 10 °C (18 °F) to 30 °C (54 °F).

Everything about fundamental spacecraft design revolves around the Tsiolkovsky rocket equation.. $\Delta v = V_e \cdot \ln[R]$. The variables are the velocity change required by the mission (Δv or delta-V), the propulsion system's exhaust velocity (V_e), and the spacecraft's mass ratio (R). Remember the mass ratio is the spacecraft's wet mass (mass fully loaded with propellant) divided by the dry mass ...
