Graphing Rational Functions Asymptotes Answer

Note that a function such as is not considered a rational function. Even though it is in the form of a fraction, the denominator does not contain a variable. Rational functions sometimes have limitations on what values can be put in for the variable.

The rational function $f(x) = \frac{a}{x - h} + k$ and the square root function $f(x) = a\sqrt{x - h} + k$ can be transformed using methods similar to those used to transform other types of functions.. Let's begin by reviewing the rational and square root parent functions. Notice that the graphs of both parent functions are either centered or begin at the origin.

Problems concerning horizontal asymptotes appear on both the AP Calculus AB and BC exam, and it's important to know how to find horizontal asymptotes both graphically (from the graph itself) and analytically (from the equation for a function).. Before we delve into finding the asymptotes though we better see what exactly an asymptote is.

How do you Find the Horizontal Asymptotes of a Function ...

Given a particular function, there is actually a 2-step procedure we can use to find the horizontal asymptote. Learn what that is in this lesson along with the rules that horizontal asymptotes follow.

Horizontal Asymptotes: Definition & Rules - Study.com

Next I'll turn to the issue of horizontal or slant asymptotes. Since the degrees of the numerator and the denominator are the same (each being 2), then this rational has a non-zero (that is, a non-x-axis) horizontal asymptote, and does not have a slant asymptote. The horizontal asymptote is found by dividing the leading terms:

The inverse cos, sec, and cot functions will return values in the I and II Quadrants, and the inverse sin, csc, and tan functions will return values in the I and IV Quadrants (but remember that you need the negative values in Quadrant IV). (I would just memorize these, since it's simple to do so). These are called domain restrictions for the inverse trig functions.
