$K = E_0 / E$. K is dielectric constant. E_0 is greater than or equal to E . Where E_0 is dielectric. And E is net field. The larger the dielectric constant, the more charge can be stored. Completely filling the space between capacitor plates with a dielectric increases the capacitance by a factor of the dielectric constant:

Resistors in Series. When are resistors in series? Resistors are in series whenever the flow of charge, called the current, must flow through devices sequentially. For example, if current flows through a person holding a screwdriver and into the Earth, then in (a) could be the resistance of the screwdriver's shaft, the resistance of its handle, the person's body resistance, and the ...
