The elegant studies of Keller et al. , , , , , , , , , , provided the first evidence of coil-stretch transition in dilute solutions under elongational flow, where they observed a sudden upturn in birefringence at a critical strain rate. Thus, it was established that, in steady flow, a polymer molecule can only adopt either a fully stretched or random coil conformation.

where q_i is the ionic charge, u_i is the mobility of each charge carrier and n_i is the number of free charged species – dissolved ions or charged mobile clusters. The dissolution of salt in a solvent is generally associated with the dielectric constant of the medium, which governs the shielding of charges from each other and thereby influences ion pairing.
