****Note**** Many of the math problems on this page can be found in my new book: The Green-Eyed Dragons and Other Mathematical Monsters. I posted a problem here, each week from 2002 to 2004. Some problems are new, and some are classics. Half of them are physics (the odd weeks), and half are math (the even weeks).

Problem of the Week - Harvard University Department of Physics

Earlier in Lesson 6, four kinematic equations were introduced and discussed. A useful problem-solving strategy was presented for use with these equations and two examples were given that illustrated the use of the strategy. Then, the application of the kinematic equations and the problem-solving strategy to free-fall motion was discussed and illustrated.

Motion with variable acceleration is quite complicated. Only in some special cases can we easily solve such problems, but usually we need to solve second order differential equations to get the answer in these problems. All of the equations of motion in kinematics problems are expressed in terms of vectors or coordinates of vectors.
