2 As VCE is further increased, beyond the thermally limited region, the safe output current decreases more rapidly. This so-called second breakdown region is a characteristic of bipolar output transistors.

Power Amplifier Stress and Power Handling Limitations - TI.com

Heating systems in "off the power grid" homes are often the weak link in the system. The conventional "plumbing and heating" installer will insist there is only one way of doing things and try to force you into following the building codes.. Unfortunately the building codes are often outdated, unrealistic and will not work for the solar-powered home.

Heating Your Solar Off Grid Home | August 2015

Comparing 10 different soil solarization techniques to see which is the most effective. I love growing melons but only have limited room for them in the back yard.

Wayne Schmidt's Soil Solarization Page - waynesthisandthat.com

Introduction. My solar tracking mirror array or "death ray" as it is affectionately referred to by my friends is actually a heliostat. A heliostat is technically any device that tracks the movement of the sun, but most often the term refers to a device that orients a mirror to reflect sunlight continuously onto a specific target.

Build a heliostat for solar heating and lighting ...

Aerodynamics, from Greek ἀήρ aer (air) + δυναμική (dynamics), is the study of motion of air, particularly as interaction with a solid object, such as an airplane wing. It is a sub-field of fluid dynamics and gas dynamics, and many aspects of aerodynamics theory are common to these fields. The term aerodynamics is often used synonymously with gas dynamics, the difference being that ...

Please, James, that is the same old tired slayer argument. Yes, the ultimate *source* of energy is the sun. But if the total *downward* energy flux was only 300 W/m², then the temperature would never rise above about 35 deg. F (assuming an infrared emissivity of 0.9)...even colder if you assume convective losses.

Does a Greenhouse Operate through the Greenhouse Effect ...

The general recommendation is to derate an EMI Filter to 50% of rated voltage and 50% of rated current, using a maximum temperature of 85 0 C. However that could be to strict for some applications, in which cause the next best option would be the dearting curve provided in the data sheet.
