Synopsis There are around 200,000 healthcare-associated infections (HAIs) in Australian acute healthcare facilities each year. This makes HAIs the most common complication affecting patients in hospital. As well as causing unnecessary pain and suffering for patients and their families, these adverse events prolong hospital stays and are costly to the health system.

Manual Cleaning Manual cleaning of dental instruments is still accepted as a method of decontamination in HTM 01-05, allowing you to comply with essential quality requirements. However, It is the least effective method of cleaning instruments, the hardest to validate, and carries an increased risk of 'sharps injury'. Manual cleaning should only be considered if you have no alternative ...

Manual Cleaning Dental Instruments | Isopharm

Hand hygiene involves cleaning hands with soap and water or an alcohol-based hand rub to prevent transmission of germs to others. Clean hands are the most important factor in preventing the spread of disease and antibiotic resistance in settings across the continuum of health care. Hand hygiene is a general term that refers to a method of removing microorganisms from the hands so the germs ...

Proven Ways to Treat and Heal Gum Infection (Gingivitis ...

An impacted wisdom tooth is the most common reason for infection; as it only partially emerges from the gum which lets bacteria into your gums; this is when nasty stuff begins to happen (i.e. infections). This presents a situation where the chance of infection is extremely high - so the tooth (or teeth if you're really unlucky) must be removed ASAP.
