Inference to the Best Explanation is a kind of abductive reasoning identified by Gilbert Harman in 1965 1.He called it abductive reasoning, but Harman's definition of abduction did not correspond exactly to Charles Sanders Peirce's triple of Deduction, Induction, and Abduction. Peirce had himself noted that all thinkers infer explanations - that is, hypotheses that might explain - various ...

Variational Bayesian methods are a family of techniques for approximating intractable integrals arising in Bayesian inference and machine learning. They are typically used in complex statistical models consisting of observed variables (usually termed "data") as well as unknown parameters and latent variables, with various sorts of relationships among the three types of random variables, as ...

The strength of inference regarding the presence or magnitude of risk effects is contingent upon the focal measure of predation risk and its mechanistic association with the response of prey (Ford and Goheen, 2015). Moll et al. (2017) classified measures of predation risk into three broad categories: risky places, risky times, and habitat characteristics.
