Biofuels accounted for around 3% of the total global transportation fuels by 2012 . Figure 1 shows that as the energy demand in the transportation sector keeps increasing in the near term, the ratio of biofuel to the total amount of fuel is also expected to increase , which from a long-term perspective may eventually lead to considerable mitigation of the net GHG emission .

A rocket engine uses stored rocket propellant mass for forming its high-speed propulsive jet. Rocket engines are reaction engines, obtaining thrust in accordance with Newton's third law. Most rocket engines use combustion, although non-combusting forms (such as cold gas thrusters) also exist. Vehicles propelled by rocket engines are commonly called rockets.

This power supply outputs one adjustable voltage, which is indicated by the one set of banana jack terminals. The above arrangement of output terminals with the ground terminal between the + and - terminals is the most common and makes connecting either terminal to ground using a metal shorting bar very convenient.
