Introduction to Time Series Analysis: Part 1

The reason I took up this section first was that until unless your time series is stationary, you cannot build a time series model. In cases where the stationary criterion are violated, the first requisite becomes to stationarize the time series and then try stochastic models to predict this time series.

Lecture 1 1.1 Introduction A time series is a set of observations x_t , each one being recorded at a specific time t . Definition 1.1 A time series model for the observed data $\{x_t\}$ is a specification of the joint distributions (or possibly only the means and covariances) of a sequence of random variables $\{X_t\}$ of which $\{x_t\}$ is postulated to be a realization.
