### How To Find Solutions Inequalities

Section 2-1 : Solutions and Solution Sets. We will start off this chapter with a fairly short section with some basic terminology that we use on a fairly regular basis in solving equations and inequalities.

Step 2: Determine which side of the line contains the solutions. Since  $y$  is less than the expression, you will shade below the line. If you are unsure of which side to shade, pick any point on the graph (that's not on the line). You are choosing a test point to determine which side contains the solutions.

Logarithmic inequalities are inequalities in which one (or both) sides involve a logarithm. Like exponential inequalities, they are useful in analyzing situations involving repeated multiplication, such as in the cases of interest and exponential decay. The key to working with logarithmic inequalities is the following fact: If ...

Solutions and Solution Sets – In this section we introduce some of the basic notation and ideas involved in solving equations and inequalities. We define solutions for equations and inequalities and solution sets. Linear Equations – In this section we give a process for solving linear equations, including equations with rational expressions, and we illustrate the process with several examples.

In mathematics, an inequality is a relation that holds between two values when they are different (see also: equality).. The notation  $a \neq b$  means that  $a$  is not equal to  $b$ .; It does not say that one is greater than the other, or even that they can be compared in size. If the values in question are elements of an ordered set, such as the integers or the real numbers, they can be compared in size.
