This equation is also known as the Fourier-Biot equation, and provides the basic tool for heat conduction analysis. From its solution, we can obtain the temperature field as a function of time. In words, the heat conduction equation states that: At any point in the medium the net rate of energy transfer by conduction into a unit volume plus the volumetric rate of thermal energy generation must ...

Capillary driven heat pipes have been investigated for range of thermal control applications in the automotive sector [22,23]. A heat pipe can transfer heat at orders of magnitude higher than a similar size of solid metal rod, without the use of moving parts [, , ]. For electronic devices such as LED headlamps and LCD displays, heat pipes can be invariably used to transfer, spread and dissipate ...

Summary of Pump and Compressor. Pump is a hydraulic machine that alters a fluids' energy, which flows through the machine. In the literature, pumps are divided into dynamic and positive displacement pumps, where dynamic are defined as pumps in which the liquid is transmitted by the action of forces that are acting on them in a space that is continuously connected to the suction and pressure ...

1. Introduction. AM is a rapidly growing technique, where digital 3D design data is used to directly build up a product in a layer-by-layer process following deposition, melting, fusion and binding of the successive material layers [1]. It is a direct manufacturing technology that enables to fabricate components composed of metal, polymer, ceramic, and composites with intricate features through ...
