Some of the major unsolved problems in physics are theoretical, meaning that existing theories seem incapable of explaining a certain observed phenomenon or experimental result. The others are experimental, meaning that there is a difficulty in creating an experiment to test a proposed theory or investigate a phenomenon in greater detail.. There are still some deficiencies in the Standard ...

The source of the changing magnetic fields in MRI may either be the imaging gradients or radiofrequency (RF) coils. The conductive material in which eddy currents are induced may be any metallic component of the MR scanner (other coils, shields, tubes, and housing), wires or devices within or on the patient, and the patient as a whole (in the final analysis, people are just big bags of saline!)

24 Essential C++ Interview Questions and Answers - Toptal

While redshift can be used to tell us about the recession velocity of (non relativistic) galaxies, we also need to find a way to measure the distance to these galaxies. Astronomers have two main methods to measure these distances; parallax (more parallax here) and cepheid variable stars – there's a Khan Academy video on cepheid variable stars.

Is having a Path Length of 0 and None the same thing for Basic Constraint's of a CA type? To clarify, does a path length of 0 mean that the CA can issue no certificates while a path length of none mean that it can issue an infinite amount of certificates?

Certificates Basic Constraint's Path Length - Stack Overflow

This week, we've looked at calculating radiation doses. The absorbed dose D , measured in Grays (Gy), takes into account the energy E absorbed and the mass m of the absorbing tissue.. The higher the energy, the greater the absorbed dose. If you are wondering why the absorbing mass is important, consider the different masses of tissue involved in a dental x-ray and a chest x-ray....
