Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

Biology - Wikipedia

A protist (/ ' p r oʊ t ɪ s t /) is any eukaryotic organism (one with cells containing a nucleus) that is not an animal, plant or fungus. The protists do not form a natural group, or clade, since they exclude certain eukaryotes; but, like algae or invertebrates, they are often grouped together for convenience. In some systems of biological classification, such as the popular five-kingdom ...

Protist - Wikipedia

In April 2014, scientists in South Korea and the United States announced that they had cloned a human embryo, which could have developed into a foetus if it had been implanted into a surrogate mother.. Cloning is the process of producing genetically identical individuals. This happens naturally in all asexual reproduction and in sexual reproduction when identical siblings are born.
