The chemical reactions of life take place in aqueous solutions. The dissolved substances in a solution are called solutes. In the human body, solutes vary in different parts of the body, but may include proteins—including those that transport lipids, carbohydrates, and, very importantly, electrolytes.

- Parotid glands produce serous fluid containing enzymes, electrolytes, and limited mucin • Submandibular and sublingual gland produce a more viscous fluid than

THE DIGESTIVE SYSTEM Topic 4: Secretion

Oral rehydration therapy (ORT) is a type of fluid replacement used to prevent and treat dehydration, especially that due to diarrhea. It involves drinking water with modest amounts of sugar and salts, specifically sodium and potassium. Oral rehydration therapy can also be given by a nasogastric tube. Therapy should routinely include the use of zinc supplements.

Oral rehydration therapy - Wikipedia

Blood is the "river of life" that surges within us. It transports everything that must be carried from one place to another within the body- nutrients, wastes (headed for elimination from the body) and body heat through blood vessels. Long before modern medicine, blood was viewed as magical, because when it drained from the body, life departed as well.

In 1971, the AAOS published the first emergency medical technician (EMT) textbook, Emergency Care and Transportation of the Sick and Injured, and laid the foundation for emergency medical services (EMS) training. Today, the Eleventh Edition—also known as the “Orange Book” for its trademark orange cover—transforms how EMS education is delivered throughout the world to train EMS providers.
