Leptin (from Greek λεπτός leptos, "thin") is a hormone predominantly made by adipose cells and the small intestine that helps to regulate energy balance by inhibiting hunger. This hormone acts on receptors in the arcuate nucleus of the hypothalamus. In obesity, a decreased sensitivity to leptin occurs (similar to insulin resistance in type 2 diabetes), resulting in an inability to detect ...

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.
