Electromagnetic energy describes all the different kinds of energies released into space by stars such as the Sun and is made when an atom absorbs energy. The electromagnetic spectrum is a continuum of all electromagnetic waves arranged according to frequency and wavelength. Take up the quiz below and get to review all that we covered these past days.

Both of these waves are on the electromagnetic spectrum. Any wave on the spectrum will have the same speed, the speed of light. Radio waves, microwaves, infrared waves, visible light, ultraviolet light, and gamma rays are all on the spectrum. They all have the same ultimate speed, but vary in their wavelengths, frequencies, and energy levels.
