A resource is a main source or supply from which a benefit is produced and it has some utility. Resources can broadly be classified upon their availability—they are classified into renewable and non-renewable resources. Examples of non renewable resources are coal ,crude oil natural gas nuclear energy etc. Examples of renewable resources are air,water,wind,solar energy etc.

The most widely used measurement unit for turbidity is the Formazin Turbidity Unit (FTU). ISO refers to its units as FNU (Formazin Nephelometric Units). ISO 7027 provides the method in water quality for the determination of turbidity. It is used to determine the concentration of suspended particles in a sample of water by measuring the incident light scattered at right angles from the sample.
