What are intercepts and how do you find them? Intercepts are where a graph crosses either the x-axis or the y-axis. Not all functions will have intercepts, but when you are working with the graph of a linear function, it will have both an x-intercept and a y-intercept. An x-intercept is where the graph crosses the x-axis and a y-intercept is where it crosses the y-axis.

Intercepts of Lines - AlgebraLAB

Using the "slope-intercept" form of the line's equation ($y = mx + b$), you solve for b (which is the y-intercept you're looking for). Substitute the known slope for m, and substitute the known point's coordinates for x and y, respectively, in the slope-intercept equation.
