Blood gases are a group of tests that are performed together to measure the pH and the amount of oxygen (O₂) and carbon dioxide (CO₂) present in a sample of blood, usually from an artery, in order to evaluate lung function and help detect an acid-base imbalance that could indicate a respiratory, metabolic or kidney disorder.. A person's body carefully regulates blood pH, maintaining it ...

Serology - Blood and other Bodily Fluids. When evaluating forensic tests on suspected blood, semen, or saliva evidence, it is important for defenders to understand first the difference between presumptive and confirmatory tests and why that distinction is so important:

Forensic Resources - ncids.com

Universal donors are those with an O negative blood type. Why? O negative blood can be used in transfusions for any blood type. Type O is routinely in short supply and in high demand by hospitals - both because it is the most common blood type and because type O negative blood is the universal blood type needed for emergency transfusions and for immune deficient infants.
