Habitat Animal Printouts. The Earth has many different environments, varying in temperature, moisture, light, and many other factors. Each of these habitats has distinct life forms living in it, forming complex communities of interdependent organisms. A complex community of plants and animals in a region and a climate is called a biome.

BiomeViewer | HHMI BioInteractive

A biome is an ecological community of plants and animals, soil and water and air, living together in a particular climatic zone. There are six land biomes: arctic tundra, taiga, temperate deciduous forest, tropical rain forest, tropical savannah, and desert. Each biome has specific climatic conditions - temperature, precipitation amounts, soil conditions, vegetation, and animals.
