The Pathway to a Universal Influenza Vaccine - ScienceDirect

Vaccination coverage and decline of the disease burden globally. We provide detail on three vaccinations: DTP, measles, and polio. These diseases (plus tuberculosis) were the original six targeted by the WHO for their Expanded Programme on Immunization (EPI) and mass vaccination coverage expanded greatly. The EPI was initiated by the WHO in 1974 to build on the success of smallpox eradication ...

Vaccination - Our World in Data

It is always better to prevent a disease than to treat it after it occurs. Diseases that used to be common in this country and around the world, including polio, measles, diphtheria, pertussis (whooping cough), rubella (German measles), mumps, tetanus, rotavirus and Haemophilus influenzae type b (Hib) can now be prevented by vaccination. Thanks to a vaccine, one of the most terrible diseases ...
