Muscular System. The muscular system is responsible for the movement of the human body. Attached to the bones of the skeletal system are about 700 named muscles that make up roughly half of a person's body weight. Each of these muscles is a discrete organ constructed of skeletal muscle tissue, blood vessels, tendons, and nerves.

Muscular System Interactive Physiology. Step 1-a nerve releases a chemical called acetylcholine, which flows across the space to the cell membrane. Step 2-then an electrical signal travels along the membrane and into the T tubules. Step 3-this causes the SR to release calcium. Step 4-Calcium binds to troponin and moves it out of the way, then actin and myosin slide past each other.
