Classifying Animals. Download the PDF version of this lesson plan.. Introduction. This lesson explores the classification system used to identify animals. Most children are fascinated by animals and often have an animal that is a particular favorite, possibly even an animal the child has never seen before.

Classifying Animals - Mensa for Kids

At a lower phylogenetic level, the tarsiers have, until recently, all been placed in the genus Tarsius, while it was debated whether the species should be placed in two (a Sulawesi and a Philippine-western group) or three separate genera (Sulawesi, Philippine and western groups). Species level taxonomy is complex, with morphology often being of limited use compared to vocalizations.

Tarsier - Wikipedia

The correct answer is (C). The information in DNA is stored as four nucleotides: adenine (A), guanine (G), cytosine (C), and thymine (T). The nucleotides adenine and guanine are classified as purines, while thymine and cytosine are classified as pyrimidines.

The wandering albatross, snowy albatross, white-winged albatross or goonie (*Diomedea exulans*) is a large seabird from the family Diomedidae, which has a circumpolar range in the Southern Ocean. It was the last species of albatross to be described, and was long considered the same species as the Tristan albatross and the Antipodean albatross. A few authors still consider them all subspecies of ...

Biology is the "science of life." It is the study of living and once-living things, from submicroscopic structures in single-celled organisms to entire ecosystems with billions of interacting organisms; it further ranges in time focus from a single metabolic reaction inside a cell to the life history of one individual and on to the course of many species over eons of time.

Biology - New World Encyclopedia

The purpose of the 2nd Amendment is to protect the right of individuals to keep and bear arms. The Amendment was ratified on December 17, 1791.

What is the plural for bear - answers.com

The key to the healing treatment is a bacterium with some useful properties. It forms spores, so can lie dormant for years. When exposed to water and some nutrients, the spores germinate; the bacteria can now metabolize, generating CO₂ which dissolves to form bicarbonate ions (HCO₃⁻). There is calcium ion (Ca²⁺) around, so calcium carbonate (CaCO₃) precipitates.

Musings: September-December 2012 (archive)
