Multi-step inequalities are solved in exactly the same way as are one step inequalities or two step inequalities. The only difference between them is the number of steps you have to perform in order to get to the solution. Since the number of steps in multi-step inequalities is not limited, they can get pretty complicated. But, if you follow the order of operations, remember all you have ...

Use algebra tiles to model each equation. Previously, you have used algebra tiles to model one- and two-step equations with one variable. An algebra tile is just a symbol—one thing that represents something else—so if you change what the algebra tiles represent, you can use them to model equations with two variables. 1 Model  $x + 2y = 4y$ .
