FORCES . A force is any push or pull that causes an object to move, stop, or change speed or direction.; The greater the force, the greater the change in motion will be. The more massive an object, the less effect a given force will have on the object.; Unless acted on by a force, objects in motion tend to stay in motion and objects at rest remain at rest.

Many senior managers today are aggressively trying to transform their companies, seeking radically to improve performance by changing behavior and capabilities throughout the organization. Unfortunately, most leadership groups lack a proven way of thinking about the challenge. Ask your management team what a good business plan looks like, and you will probably find close agreement.

Why a Scientific Format? The scientific format may seem confusing for the beginning science writer due to its rigid structure which is so different from writing in the humanities. One reason for using this format is that it is a means of efficiently communicating scientific findings to the broad community of scientists in a uniform manner.

Texas is the second-largest U.S. state, after Alaska, with an area of 268,820 square miles (696,200 km<sup>2</sup>). Though 10% larger than France and almost twice as large as Germany or Japan, it ranks only 27th worldwide amongst country subdivisions by size. If it were an independent country, Texas would be the 40th largest behind Chile and Zambia.. Texas is in the south central part of the United ...
