This is really about it. A very important point is this: No matter what kind of equation you're dealing with -- linear or otherwise -- whatever you do to the one side, you MUST do the exact same thing to the other side! Equations are like little children: You have to be totally, totally fair! You cannot subtract 5 from one side of the equation and forget to do it with another side.

Also note: The pictures on the first page of this lesson are very useful for explaining "what's going on" with linear systems, but pictures are not terribly useful for finding actual solutions to systems. For instance, in the picture at right, is the solution point at $(-3, 2)$, or at $(-3.15, 1.97)$?
