In mathematics, a partial differential equation (PDE) is a differential equation that contains unknown multivariable functions and their partial derivatives. PDEs are used to formulate problems involving functions of several variables, and are either solved by hand, or used to create a computer model. A special case is ordinary differential equations (ODEs), which deal with functions of a single ...

In electromagnetism and applications, an inhomogeneous electromagnetic wave equation, or nonhomogeneous electromagnetic wave equation, is one of a set of wave equations describing the propagation of electromagnetic waves generated by nonzero source charges and currents. The source terms in the wave equations makes the partial differential equations inhomogeneous, if the source terms are zero ...

Add 4 drops of concentrated sulphuric acid to each test tube. Pour about 150 ml of tap water in a 250 ml beaker. Place the test tubes in the water and heat the water on a hot plate to a temperature of about 60°C – 75° Leave the test tubes in the hot water bath for 15 minutes.

Note added October 2005: In creating this page I have been helped much by the journal papers, and web resources of John Bachall. John passed away in August, 2005. At least for the time being, his webpage at the Institute for Advanced Study in Princeton, remains active, and I will keep those links here as long as I can.

The development of transient jets when liquid bodies are electrified was well known to Rayleigh (1882), who developed the first linear stability analysis of an electrified droplet. He assumed idealized conditions, but his calculation of the critical charge level has become a widely used result (Fernández de la Mora, 2007, Saville, 1997). The so-called Rayleigh breakup of a charged droplet
