How the Body Works - KidsHealth

The immune system is a complex network of cells, tissues, organs, and the substances they make. It helps the body fight infections and other diseases. White blood cells, or leukocytes, play the main role in immune responses. These cells carry out the many tasks required to protect the body against disease-causing microbes and abnormal cells.

Biological Therapies for Cancer - National Cancer Institute

Adaptive immunity can also be divided by the type of immune mediators involved; humoral immunity is the aspect of immunity that is mediated by secreted antibodies, whereas cell mediated immunity involves T-lymphocytes alone. Humoral immunity is called active when the organism generates its antibodies, and passive when antibodies are transferred between individuals or species.
