Combustion, or burning, is a high-temperature exothermic redox chemical reaction between a fuel (the reductant) and an oxidant, usually atmospheric oxygen, that produces oxidized, often gaseous products, in a mixture termed as smoke. Combustion in a fire produces a flame, and the heat produced can make combustion self-sustaining. Combustion is often a complicated sequence of elementary radical ...

Biofuels accounted for around 3% of the total global transportation fuels by 2012 . Figure 1 shows that as the energy demand in the transportation sector keeps increasing in the near term, the ratio of biofuel to the total amount of fuel is also expected to increase , which from a long-term perspective may eventually lead to considerable mitigation of the net GHG emission .

A rocket engine uses stored rocket propellant mass for forming its high-speed propulsive jet. Rocket engines are reaction engines, obtaining thrust in accordance with Newton's third law. Most rocket engines use combustion, although non-combusting forms (such as cold gas thrusters) also exist. Vehicles propelled by rocket engines are commonly called rockets.

Sulphur. Sulphur is element number 16 in the periodic table and has a molar mass of 32 g mol<sup>-1</sup>. It takes the form of a yellow (smelly!) solid naturally and can be found in this state near volcanoes. Sulphur is also present in a number of metal ores, for example zinc blende (zinc sulphide, ZnS).

The key to understanding acids (as well as bases and salts) had to await Michael Faraday's mid-nineteenth century discovery that solutions of salts (now known as electrolytes) conduct electricity. This implies the existence of charged particles that can migrate under the influence of an electric field.

Agricultural crops can be injured when exposed to high concentrations of various air pollutants. Injury ranges from visible markings on the foliage, to reduced growth and yield, to premature death of the plant. The development and severity of the injury depends not only on the concentration of the particular pollutant, but also on a number of other factors.

1. Introduction. Recent forecasts for natural gas resources in the United States suggest that this fuel will be abundant and low cost for many decades , giving reason to study efficiencies and the environmental impact of the multiple paths for its use. For example, growth of natural gas use in

Think back 100 years to a world where people generally got around by walking or riding horses. What changed things? The invention of the car. Wheels may be 5500 years old, but the cars we drive round in today made their debut only in 1885. That was when German engineer Karl Benz (1844–1929) fastened a small gasoline (petrol) engine to a three-wheeled cart and made the first primitive, gas ...
