5.1 The Binary Regressor Case. Even though this is an extremely parsimonious way of encoding that, it is a very powerful tool that allows us to represent that a certain observation  $i$  is a member of a certain category  $j$ . For example, let's imagine we have income data on males and females, and we would create a variable called  $is\_male$  that is TRUE whenever  $i$  is male, FALSE otherwise ...
