Newly corrected, this highly acclaimed text is suitable for advanced physics courses. The authors present a very accessible macroscopic view of classical electromagnetics that emphasizes integrating electromagnetic theory with physical optics. The survey follows the historical development of physics, culminating in the use of four-vector relativity to fully integrate electricity with magnetism.

Aerodynamics, from Greek ἀήρ aer (air) + δυναμική (dynamics), is the study of motion of air, particularly as interaction with a solid object, such as an airplane wing. It is a sub-field of fluid dynamics and gas dynamics, and many aspects of aerodynamics theory are common to these fields. The term aerodynamics is often used synonymously with gas dynamics, the difference being that ...

Fluid mechanics is the study of the flow of fluids, and is sometimes known as hydrodynamics. Properties normally ascribed to fluids include density  $\rho$ , compressibility  $\beta$  (sometimes specified in terms of the so-called second viscosity coefficient  $\lambda$ ), and dynamic viscosity  $\eta$ . In general, the motion of fluids is extremely complicated, including highly nonlinear phenomena like ...

Theoretical background. The acid dissociation constant for an acid is a direct consequence of the underlying thermodynamics of the dissociation reaction; the  $pK_a$  value is directly proportional to the standard Gibbs free energy change for the reaction. The value of the  $pK_a$  changes with temperature and can be understood qualitatively based on Le Châtelier's principle: when the reaction is ...
