Intermolecular forces (IMF) are the forces which mediate interaction between molecules, including forces of attraction or repulsion which act between molecules and other types of neighboring particles, e.g., atoms or ions. Intermolecular forces are weak relative to intramolecular forces – the forces which hold a molecule together. For example, the covalent bond, involving sharing electron ...

INTERMOLECULAR BONDING - VAN DER WAALS FORCES

London dispersion forces (LDF, also known as dispersion forces, London forces, instantaneous dipole-induced dipole forces, or loosely van der Waals forces) are a type of force acting between atoms and molecules. They are part of the van der Waals forces. The LDF is named after the German-American physicist Fritz London

The intermolecular force is the sum of all the forces between two neighboring molecules. The forces result from the actions of the kinetic energy of atoms and the slight positive and negative electrical charges on different parts of a molecule that affect its neighbors and any solute that may be present.

1. PHYSICAL STATE. Alkanes contain only C-C and C-H sigma bonds which are almost non-polar due to very small difference of electronegativity between carbon and hydrogen atoms.

Physical Properties of Alkanes | Chemistry Assignment

Alkanes are non-polar molecules. Only weak intermolecular forces (Van der Waal's Forces (2), London Forces, Dispersion Forces, Weak Intermolecular Forces) act between the alkane molecules, so little energy is required to break these weak intermolecular forces and separate the molecules so that the compound melts and boils at quite low temperatures.. As the number of carbon atoms in the chain ...
