388 Chapter 15 Multiple Integration Of course, for different values of y_i this integral has different values; in other words, it is really a function applied to y_i : $G(y) = \int_a^b f(x,y)dx$. If we substitute back into the sum we get $\sum_{i=1}^n G(y_i)\Delta y$. This sum has a nice interpretation.

Chapter 4 : Multiple Integrals. In Calculus I we moved on to the subject of integrals once we had finished the discussion of derivatives. The same is true in this course. Now that we have finished our discussion of derivatives of functions of more than one variable we need to move on to integrals

of functions of two or three variables.

To illustrate computing double integrals as iterated integrals, we start with the simplest example of a double integral over a rectangle and then move on to an integral over a triangle. Example 1. Compute the integral $\iint_{\mathcal{R}} x y^2 \, dA$ where \mathcal{R} is the rectangle defined by $0 \leq x \leq 2$ and $0 \leq y \leq 1$ pictured below.
