Here, we describe a conceptual framework, implemented in a method called Waddington-OT, that aims to capture the notion that cells at any time are drawn from a probability distribution in gene-expression space, and each cell has a distribution of both probable origins and probable fates (). It uses scRNA-seq data collected across a time course to infer how these probability distributions evolve ...

The Student's t-test is a statistical test that compares the mean and standard deviation of two samples to see if there is a significant difference between them. In an experiment, a t-test might be used to calculate whether or not differences seen between the control and each experimental group are a factor of the manipulated variable or simply the result of chance.
