A nurse is obligated to learn common IV, or intravenous, fluids if he or she hopes to practice in this field. These solutions help keep patients hydrated.

4 Common IV Fluids a Nurse Should Know

Intravenous therapy (IV) is a therapy that delivers liquid substances directly into a vein (intra-+ ven-+ -ous). The intravenous route of administration can be used for injections (with a syringe at higher pressures) or infusions (typically using only the pressure supplied by gravity). Intravenous infusions are commonly referred to as drips. The intravenous route is the fastest way to deliver ...

Colloids. Colloids preserve a high colloid osmotic pressure in the blood, while, on the other hand, this parameter is decreased by crystalloids due to hemodilution. Therefore, they should theoretically preferentially increase the intravascular volume, whereas crystalloids also increase the interstitial volume and intracellular volume. However, there is no evidence to support that this results ...

In this article, several applications of nanomaterials in food packaging and food safety are reviewed, including: polymer/clay nanocomposites as high barrier packaging materials, silver nanoparticles as potent antimicrobial agents, and nanosensors and nanomaterial-based assays for the detection of food-relevant analytes (gasses, small organic molecules and food-borne

pathogens).

27,000 megawatt lost turns to mega gains. A major Midwestern power plant was experiencing significant losses in power generation capacity. The deposition of copper onto the turbine blades was causing an average loss of 27,000 MWh per year. , Pall proposed an assembly of diameter filter housing, which contained nineteen Ultiplex® High Flow filter cartridges.
