"An Introduction to Statistical Learning (ISL)" by James, Witten, Hastie and Tibshirani is the "how to" manual for statistical learning. Inspired by "The Elements of Statistical Learning" (Hastie, Tibshirani and Friedman), this book provides clear and intuitive guidance on how to implement cutting edge statistical and machine learning methods.

Mathematical statistics is the application of probability theory, a branch of mathematics, to statistics, as opposed to techniques for collecting statistical data. Specific mathematical techniques which are used for this include mathematical analysis, linear algebra, stochastic analysis, differential equations, and measure theory.

PROBABILITY AND MATHEMATICAL STATISTICS

Statistics is the theory and application of mathematics to the scientific method including hypothesis generation, experimental design, sampling, data collection, data summarization, estimation, prediction and inference from those results to the population from which the experimental sample was drawn. This article lists statisticians who have been instrumental in the development of theoretical ...

This book builds theoretical statistics from the first principles of probability theory. Starting from the basics of probability, the authors develop the theory of statistical inference using techniques, definitions, and concepts that are statistical and are natural extensions and consequences of previous concepts.

Random Walk--1-Dimensional. Let steps of equal length be taken along a line. Let p be the probability of taking a step to the right, the probability of taking a step to the left, the number of steps taken to the right, and the number of steps taken to the left. The quantities p , p , p , and p are related by

Three standard HI-T max curves for Types I, II and III kerogens are shown in Fig. 1 (Bordenave, 1993). Irrespective of the nature of kerogen, the HI-T max pathline of a particular kerogen has a low gradient during early and late catagenesis (T max of approx. 420–435 and 455–500°C respectively), but HI decreases exponentially, within a narrow range, in the peak oil generation phase.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
