Globular clusters are very massive objects that contain hundreds of thousands or perhaps a million stars. The HR diagram for a typical globular cluster looks very different than that of an open cluster. There are no Main Sequence stars of types OBAF, but there are many red giants.

Objective: Students will plot, label and interpret the Hertzsprung Russell Diagram. Background: You are about to create your own HR Diagram, a chart that revolutionized the study of stars. You will have a labeled chart and a series of points to plot. From these points, you can deduce a lot of information about stars!

Objective Students will plot, label and interpret the ...

For this lab, you will be using “H-R” (or equivalently, “Hertzsprung-Russell”) diagrams to observe the temperature and brightness of stars in several globular and open clusters. As you have seen in class, the H-R diagram plots temperature along the horizontal x-axis, and luminosity on the vertical axis.

Continue reading the rest of the SDSS HR Diagram lab from where you left off in Lab 2, Part 1 (you had just worked on Exercise 2). There are pages on parallax, creating HR diagrams for an open cluster (the Pleiades) and a globular cluster (Palomar 5). You are not required to do any of the exercises on these pages.

You can assume that all the stars are at the same distance. Students will see the difficulty of creating an H-R diagram due to the large amount of data necessary. They will then use one of two simple tools to search the data and make an H-R diagram for a globular cluster using hundreds of data points. Questions and Exercises

H-R Diagram - Teacher's Guide

H-R Diagram of a Globular Cluster. Clusters like the Pleiades lie deep within our galaxy. The SDSS, on the other hand, looks primarily above and below the plane of the galaxy. This view is great for seeing distant galaxies and quasars, but it is not very good for seeing star clusters.
